Their support is not good, sometimes they only reply with documentation pages and most of them don't know how to do advanced things.

Their API is great but when you want to do advanced stuff there's no way to do some things.

Invoicing can be a problem if you make a mistake on an invoice, only an administrator can correct this. While it is a good feature overall, we feel that it hinders us especially since a huge part of our business is invoicing.

Zoho Books doesn't connect automatically to our banking accounts which makes for a lot of manual work when applying for payments. It works well with online payments but not with offline payments.

While great for accountants, Banking and Reports does not give a full view or offer the best overview of company cash flow for administrators and managers.

The mobile Android app needs a design overhaul. Compared to its iOS counterpart, it lacks good design and functionality

Online payment gateways make it easy for our clients to pay all their invoices online.

Mobile apps allow us to do time-tracking and send invoices instantly while on service calls.

Set up automatic invoices for clients.

Integrates with Zoho CRM very well.

Bids.

Invoicing.

Connecting with banks for expenses.

The projects feature is what we use a lot it helps setting up projects as well as tracking expenses and bills for the whole project. The budgeting feature is very developed, allowing you to budget by total project cost, total project hours, hours per task, or hours per staff.

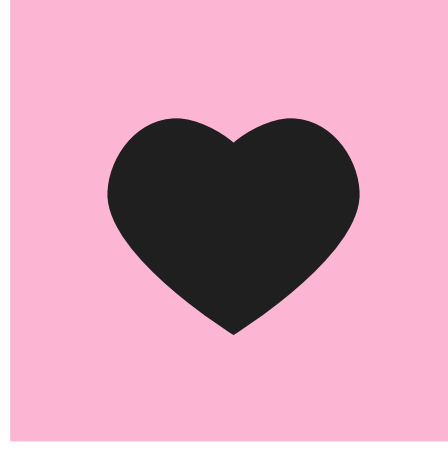

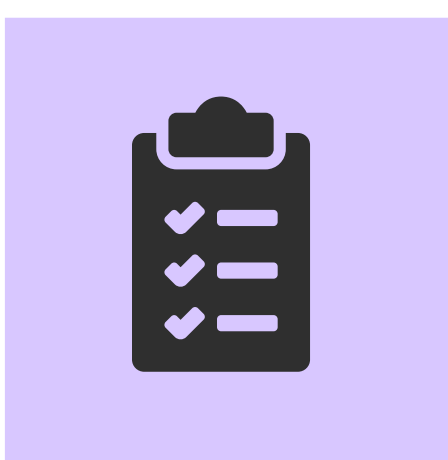

Customer Estimates and Invoices are very easy to setup and send directly from the app (it also has a very nice and customizable reminder option).

Bank reconciliation and Financial reporting are very developed and make it easy to share information with bookkeepers and accounting specialists.

Stock and pricing listings is very intuitive and easy and makes it a very helpful and time saving feature.
